

Description

The central hospital of Silkeborg aims at satisfying any patient's need for examination, treatment, care and rehabilitation in a highly cooperative and professional atmosphere. The hospital's bathrooms were rebuilt and refurbished as part of a major renovation project aimed at satisfying patients' demands for optimal treatment within the framework of the current Health and Safety at Work regulations.

The Pressalit Care solution

- Tracks on all walls
- R4760 Wash basin bracket
- R3548 Support arms
- R7568 Shower chair
- RT756 Shower mixer bracket
- Various baskets and accessories

Effect

The bathrooms were renovated and several bathrooms were combined to increase space. Despite the efforts made to increase floor space, the rooms remained quite small compared to Danish standards. To compensate for this, the furnishing had to be very flexible and thanks to the adjustability of the Pressalit Care products installed, the rooms are now accessible to all kinds of patients, no matter their physical abilities.
